A White Paper from Assmann

Assmann Corporation of America offers products in a variety of different colors in both Crosslink and Linear polyethylene. This document is to serve as a representative color chart of our pigmented and our natural colored tanks.

Crosslink polyethylene (pictured below as XL) in its natural state (non-pigmented) is off-white, slightly yellow or beige in color, but still semi-translucent. Occasionally, customers are surprised when they receive their first Crosslink vessel as **the appearance can be confused with a “dirty white tank.”** Linear polyethylene (pictured below as “L”) in its natural state (non-pigmented) is white in color, still semi- translucent.

Assmann. Standard Color Options

The colors Assmann Corporation offers can be added to both Crosslink and Linear polyethylene, however when pigmenting Crosslink, the colors will vary from this photo as they do not start with a natural white base. *Note: All colored tanks are made to order by Assmann Corporation and cannot be returned or exchanged - in the event that the color does not meet your expectations. Please choose carefully when ordering!*

The colors shown are representative of linear polyethylene dry blended pigments. Crosslink storage tank colors will be darker or carry a beige tint when pigmented.

The colors shown are typical pigments that Assmann Corporation stocks. We also have the ability to custom color match or provide compounded colors. Please consult our factory for further assistance.
